GEEK ROOM GLOBAL AI HACKATHON 2026 · CHALLENGE 05

Stale-Answer Detector

Catches outdated claims in LLM answers

BUILT WITH

Bifrost by Maxim AI + Tavily

TEAM

Rida Kalam (solo)

An open model we tested still says Parag Agrawal runs Twitter.

LLMs repeat prices, versions, laws and job titles with full confidence long after they change.

How it works

EXTRACT

Split the answer into atomic claims and rate each one's time-sensitivity (model + regex signals)

RESEARCH

Two Tavily searches per claim: current state plus a change-seeking query

ASSESS

A stronger model gives a verdict with quotes; code checks every quote against the page text

SCORE

Confidence from verified quotes, independent sites and evidence age, plus source links

Two tools, two jobs

Bifrost (self-hosted gateway)

Every model call. Virtual key with $0.30 budget, rate limit and model allow-list. Automatic fallback. Per-request logs and cost.

Tavily (live evidence)

The only evidence source. Advanced search with relevant chunks. News topic for people and laws. No pre-written answers.

Eight claims checked live

6

Changed

Still supported

1

Unverifiable

<1¢

Model cost

Run it on your answers

Clone the repo, start Bifrost, add a Tavily key, run staledetect check answer.md
